21ST SPRING PRODUCTION SALE

THURSDAY, MARCH 9, 2023 • 12:30 PM • AT THE RANCH
MANHATTAN, KANSAS

ANGUS GENETICS

John & Bonnie Slocombe
4291 McDowell Creek Road • Manhattan, Kansas 66502
(785) 539-4726 • www.bjangus.com

Welcome to BJ Angus Genetics 2nd Spring Production Sale!

BJ Angus Genetics has produced Angus seedstock since 1993... time flies when you're doing what you love. We always have a passion to produce Angus cattle which excel in the economically important traits, maximize your cowherd profits and minimize your problems. We build bulls and females excelling in calving ease, disposition, carcass quality and maternal traits. It's a simple philosophy, but one that has worked for us and given BJ Angus Genetics the pleasure of marketing seedstock for 30 years. We guarantee our cattle will work for you.

We believe this is an excellent offering of bulls, registered females and commercial heifers. All the cattle have genomic enhanced EPDs, performance measurements, \$Value Indexes and Method Genetics Indexes ranking in the top tiers of the Angus breed. We expect these cattle to produce progeny that will make you money. In today's cattle feeding environment, cattle sold on a grid like U.S. Premium Beef which grade upper 2/3 Choice and Prime are receiving all-time high premiums. In the past few months, customers have shared grid premiums for CAB and USDA Prime exceeding \$500 per head.

Bonnie & John Slocombe

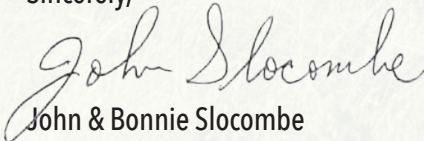

Cattle prices look good and all the economists we follow are predicting strong prices for the next few years due to lower supplies of cattle nationwide while demand stays strong. Now is the time to plan ahead to make sure you are producing as many quality pounds to sell as possible.

Once again, we are proud to offer you registered cattle from Sherfick Cattle Company, WaKeeney, Kansas, and commercial bred heifers from Brian Walt, Collyer, Kansas. Not only are they excellent people and businessmen, but they breed cattle that will make you money. Buy with confidence as they honor the BJ Angus Genetics guarantee!

Please go to our websites, www.bjangus.com, or www.sherfickcattleco.com to view updated EPDs, \$Value Indexes, sortable Excel spreadsheets, yearling measurements and ultrasound scan data on the 14-month-old bulls and open heifers, videos of each animal in the sale (March 1) and the online catalog. If you are unable to join us at the sale, please consider logging on to www.LiveAuctions.tv to bid online.

THANK YOU FOR ALL OF YOUR PAST SUPPORT AND CONFIDENCE IN OUR BREEDING PROGRAM.

Sincerely,

John & Bonnie Slocombe

LIVESTOCK MORTALITY INSURANCE

James Bessler (815) 762-2641

Watch the sale and bid online.

Please visit www.LiveAuctions.tv to create an account and request a buyer number. Instructions are available on the website to walk you through the account set-up process or call Superior Livestock at 1-800-431-4452 for assistance.

ADDITIONAL SALE INFORMATION

Cattle will sell in sale book order—Lot 1, 2, 3 and so on.

HERD HEALTH: All cattle are eligible for interstate shipment and will be accompanied by proper health certificates for immediate transport.

TERMS AND CONDITIONS: Cattle will sell under the suggested Terms & Conditions of the American Angus Association (www.angus.org/Pub/suggested_sale_terms.pdf). Purchaser assumes the risk of death or injury to their livestock immediately after the animal is sold. Insurance will be available for cattle on sale day.

SIGHT UNSEEN PURCHASES: If you would like assistance in selecting bulls/females, please call at least 72 hours before the sale, if possible, to go over your needs. This gives us time to determine the best possible bulls/females for your operation

and get back with you to discuss them. You may leave bids with us if desired, we will buy the cattle as cheap as we can. Our programs are built on trust and honesty.

INSPECTION OF CATTLE: The cattle are available for inspection at BJ Angus Genetics after March 6. Prior to March 6, the registered females owned by BJ Angus Genetics are available for inspection anytime, Manhattan KS; all the bulls and the registered females owned by Travis Sherfick are available for inspection at Sherfick Cattle Company, WaKeeney KS; the commercial Angus bred heifers are available for inspection at Brian Walt's Ranch, Collyer, KS.

SUPPLEMENTAL INFORMATION: A supplement sheet with up-to-date breeding and ultrasound information will be posted

on www.bjangus.com, www.sherfickcattleco.com, and LiveAuctions.tv. Announcements made by the auctioneer regarding the cattle selling takes precedence over the information listed in this sale book or the sale supplement.

SETTLEMENT: Cattle purchases are to be settled before pick-up or delivery. Terms of the sale are check or cash.

LIABILITY: All persons viewing the cattle before, during and after the sale do so at their own risk. The owners assume no liability, legal or otherwise, for injury, loss or damages.

INSURANCE: Insurance will be available for your purchases sale day.

Go to www.bjangus.com to view photos, videos, and updated information of the sale offering!

HOW TO READ AND USE SALE ANIMAL DATA

An Expected Progeny Difference (EPD) is a prediction of how future progeny of a sire or dam are expected to perform in various production scenarios, and carcass traits which are measurable. EPDs are expressed in actual pounds, square inches, or centimeters (depending on the trait), plus or minus what you can expect in the weights or measurements of progeny sired by a particular animal as compared with another animal. The EPDs of the animals listed in the sale book can be compared to other animals of the same breed.

The CAB® icon will appear on the pedigree of those cattle that meet the criteria for targeting the Certified Angus Beef® Brand.

Calving Ease Direct (CED) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW) predicts the difference in average birth weight of a bull's calves compared to calves of another bull. Reported in pounds.

* Experience has shown that an Angus bull with a CED EPD of +6 or higher and a BW EPD of +2.0 or less can be used on first-calf heifers with a minimal number of calving problems. If you do not have heifers to breed and just need a bull for cows that have calved before, most Angus bulls are acceptable for use on mature cows from a birth weight standpoint.

Weaning Weight EPD (WW) is a prediction of a bull's ability to transmit weaning growth to his progeny. For example, Bull A has a Weaning Weight EPD of +60 pounds and Bull B has a Weaning Weight EPD of +40 pounds. At weaning, Bull A's calves will average 20 pounds heavier. A higher number is desirable.

Yearling Weight EPD (YW) takes into account both pre-weaning and post weaning growth. Yearling weight is the most heritable of all growth traits. You can expect bulls with high yearling EPDs to produce fast gaining calves. If Bull A has a Yearling EPD of +90 and Bull B has a Yearling EPD of +60, Bull A's calves will average 30 pounds heavier than Bull B's at one year of age.

Scrotal Circumference EPD (SC) expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (Doc) is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Milk EPD expressed in pounds of weaning weight that result from the amount of milk produced by daughters of a particular bull, as compared to the daughters of other bulls. If Bull A is +25 for Milk and Bull B is +15, bull A's daughters' calves will weigh 10 pounds heavier at weaning due to her superior milking ability.

CARCASS EPDS

Carcass Weight EPD (CW) expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb) predicts the difference in average USDA marbling score of a bull's progeny compared to progeny of another bull at a similar end point. The higher the value, the higher the amount of intramuscular fat (tasty fat) in the ribeye, which positively affects quality grade.

Ribeye Area EPD (RE) expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

Maternal Weaned Calf Value (\$M) an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights.

Weaned Calf Value (\$W) an index expressed in dollars per head, provides the expected differences in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W will increase pre-weaning growth.

Grid Value (\$G) an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes.

Beef Value (\$B) an index expressed in dollars per carcass that represents the expected average differences in the progeny post weaning performance and carcass value compared to progeny of other sires.

Combined Value (\$C) an index expressed in dollars per head that includes all traits that makeup \$M and \$B.

PERFORMANCE INFORMATION

Adj 205: Weaning weights adjusted to 205 days of age and for age of dam. Quality of recipient dams will affect weights of ET calves.

Adj. 365: Weight, scrotal circumference adjusted to 365 days of age.

%IMF: The amount of desirable fat or marbling in the ribeye muscle adjusted to 365 days of age.

Adj. Ribeye: Measured in square inches and adjusted to 365 days of age. Most heritable of all traits.

PERCENTILE RANKINGS for EPDs and \$Indexes

Percentile rankings for EPDs and \$Indexes allow you to see how the cattle in the sale offering stack up to any Angus bull/female, NOT just those in our sale group.

A Word About The Bulls...

A very nice set of 88 bulls have been selected for the 21st Annual Sale. Fifty three bulls are 18-20 months old, 17 bulls are 16-17 months old and 18 bulls are 14 months old. The EPDs of the bulls selling are consistently strong for calving-ease, weaning, post-weaning growth, marbling and maternal traits. These are the selection goals we have focused on for years. Check out the average EPDs and Index values on page 2 for this set of bulls.

16-20 Month Old Bulls

The coming two-year-old bulls were fence line weaned (with no creep) and preconditioned. From post-weaning to yearling the bulls were fed a high roughage ration designed for 2.5-3.0 pounds average daily gain. This allowed the bulls to grow at a pace that promoted bone and muscle deposition and reduced fat deposition. On sale day the bulls' appearances are more of a product of the 6-8 months of growth post yearling. All the bulls will be significantly heavier on sale day than their adjusted yearling weight. The bulls are athletic, structurally sound with excellent feet and legs and we are confident they will perform in pasture breeding cows as trouble-free sires should. We prefer to develop our coming two-year-old bulls in this manner as it is more economical over the longer development period and certainly fits a real-world commercial situation while helping to ensure longevity. Our goal is to have them adequately grown (but not fat) and "ready to go to work" after the sale.

14 Month Old Bulls

The 14 month old bulls were weaned (with no creep) and preconditioned. They were fed a high roughage ration designed for 2.5 - 3.0 pounds average daily gain.

How the Bulls are Handled

1. Pre-weaning the bulls were vaccinated with Bovi-Shield Gold One Shot, Enforce 3, and Moraxella Bovis Bacterin-Toxoid Alpha 7/MB-1 (Blackleg with Pinkeye). At weaning, bulls were boosted with the same and dewormed with injectable Dectomax. A blood sample was taken from each bull and submitted to the AAA for DNA testing and parent verification. Additionally the bulls were tested for PI BVD and Brucellosis and found to be free of these diseases.
2. At approximately 365 days of age the bulls were weighed, scrotal measured, hip height measured, dewormed for internal parasites with Valbazen and external parasites with Dectomax pour-on; and, ultrasounded for carcass measurements (marbling, ribeye, rib fat thickness, and rump fat thickness) by Casey Worrel, a AAA CUP Certified technician from Harper Texas.
3. All bulls were given a complete breeding soundness exam by Dr. Dave Rethorst, DVM, and Dr. Curt Vogel, DVM, in February 2023 and boosted with Bovi-Shield Gold FP5 VL5 HB and dewormed with Cydectin pour-on. Breeding soundness exam papers will be available to buyers on sale day.
4. The bulls were walked through daily to evaluate health and to condition them to people. Extreme care is taken to produce bulls that are gentle and have good breeding longevity.

**Data should only be compared WITHIN like age and development groups.
Use the EPDs to compare bulls between the development groups.**

REVENUE SHARING & SEMEN INTEREST

BJ Angus Genetics or Sherfick Cattle Company retains a 1/3 semen interest in every bull sold. This means the bull is totally in your control in how you want to handle him and you get 100% of the salvage value of the bull. Simply, we are reserving the right to a share of semen sales revenue from the bull if, at some time in the future, semen sales become a possibility. If you sell the bull to another breeder, BJ Angus Genetics or Sherfick Cattle Company retains the semen interest.

It is unlikely that large amounts of semen will be sold from many bulls. However, bulls are often "discovered" later in life, after proving themselves in the breeding pasture. It is for this reason we keep a semen interest in all bulls sold.

Even bulls sold to commercial herds may become popular at a later time, as more carcass data is collected on their calves.

If you purchase a bull that we retain an interest in and you choose to collect semen from that bull as an "insurance policy" for your own use, that semen is 100% yours. BJ Angus Genetics or Sherfick Cattle Company may also wish to collect semen from the bull either for in-herd use or to build a jointly-owned semen bank for sale purposes.

If you are not interested in collecting semen on the bull, BJ Angus Genetics or Sherfick Cattle Co. has the right to collect the bull, at their own expense, for their own use. The bull would be collected at your convenience.

1144 represents the disciplined breeding we have practiced for over two decades. He combines moderate frame, calving ease and rapid early growth with top tier maternal genetics and superior carcass traits. Note his top 1% for Marbling, \$G and \$C, top 3% for \$B, top 10% for \$W and top 15% for \$M. His dam is one of our

favorites and posts progeny ultrasound ratios of 11@105 for %IMF and 11@103 for RE. His grandam, the mother of the highly used BJ Surpass, passes her superior genetic traits to progeny exceptionally and posts ultrasound ratios of 35@104 and 35@100 for %IMF and RE respectfully. Superior carcass and maternal genetics here!

Why is it important to be over +1 for marbling and muscle? It's important because marbling differentiates beef by the pound, and RE/cwt is crucial in having cattle hit the targets of value without having YG 4 & 5 discounts.

Check out this genetic gem! Like his brothers in this sale he offers calving-ease with explosive growth along with breed leading maternal and carcass traits. Study this bull as he stems from proven genetics.

FREE DELIVERY ANYWHERE IN THE LOWER 48 STATES!

Bulls and females will be delivered free anywhere in the lower 48 states. Commercial heifers will be delivered free in Kansas. As part of that delivery we work with reputable livestock transportation companies that we feel comfortable with in the handling of your cattle in both a professional and conscientious way. We will do everything possible to deliver your cattle to a point that is convenient for both you and the trucking company. In some cases where there are cattle from multiple owners loaded on the same truck, it is necessary for the buyer to meet the truck at a central location such as a livestock auction or veterinary clinic relatively close to them. We also encourage the drivers to be as flexible as possible and request that they do not deliver your cattle in the middle of the night if avoidable. If you would like to insure your cattle, you can do so on sale day. Most of the cattle are delivered within 30 days after the sale. If, for any reason, you desire an expedited delivery, please notify us and we will make arrangements for quicker delivery.

Go to www.bjangus.com to view photos, videos, and updated information of the sale offering!

THE BJ ANGUS GUARANTEE

We guarantee that all bulls sold by BJ Angus Genetics are fertile to the best of our knowledge. If a bull is injured anytime during the first breeding season following the sale so as to make them functionally infertile, we will provide you a satisfactory replacement, if available, or issue you a credit equal to the bulls purchase price minus the salvage value received for that bull. This is not a life insurance policy. We will not replace a dead animal if it is killed or dies for any reason. We would suggest normal care needs to be exercised toward these animals and particularly the yearling bulls not be allowed to get too thin. If a female is determined a non-breeder, then we would ask you to sell her and would offer you the difference of her purchase price minus the salvage value as a credit in any future BJ Angus Genetics Sale. This guarantee is in addition to the Sale Terms and Conditions of the American Angus Association which also apply.

YEARLING BULL MANAGEMENT—CARING FOR YOUR BULLS

When you get your performance-tested bull(s) home, observing these management practices will result in the best reproductive performance.

FEEDING: Remember, the bull is a yearling or long yearling and still has some growing to do. Feed the young bull well. Hay and grain plus a protein supplement will be adequate. You should feed five to ten pounds of grain and one to two pounds of protein supplement in addition to a full feed of good quality hay from now until the start of breeding season. Continue to feed liberally so the bull will grow out well.

BREEDING SEASON: Plan to use the new bull in a restricted, 45- to 60-day breeding season the first time. Observe him closely to be sure he is serving and settling females.

NUMBER OF COWS: The yearling bull should be used on a minimal number of cows or heifers. The number should be governed by his age at the start of the breeding season. The following is a guide.

Bull's Age	Number of Females
12 to 15 mos.	10 to 12
15 to 18 mos.	12 to 18
18 to 24 mos.	18 to 25
24 mos. & over	25 to 35

MANAGEMENT & HOUSING: The bull should be kept in a well-fenced lot prior to and following breeding season. A shed or other natural wind-break should be provided. Supply plenty of clean water and minerals free-choice. Treat routinely for lice and grub worms. Run bulls together with caution. Bulls of similar age which have bred cows together will usually work. Check for any unsoundness which might develop. Test annually for Brucellosis and Leptospirosis. Vaccinate for IBR, PI3, BVD and Lepto.

—Adopted from the 1999 Oklahoma BEEF, Inc., sale book

A WORD ABOUT THE FEMALES SELLING...

We are pleased to offer 74 registered Angus females in our 21st Annual Spring Sale. We are offering you the "most current" genetics at BJ Angus and SC Cattle Company. Whether you are looking for calving ease, rapid growth, maternal

traits, carcass traits or maximizing docility, we believe the females in this offering will meet your specification. Check out their average EPDs and Index values in the tables below.

Average American Angus Assn EPDs for BJ Angus 2023 Donor Females

HOW THE HEIFERS ARE HANDLED...

The bred heifers were fence line weaned (no creep) and preconditioned. From post-weaning to sale day they were developed in large Flint Hills pastures. Sixty days prior to breeding they were hand fed 6 pounds/head/day of a 17% protein grower diet while grazing pastures and offered free choice prairie hay beginning November 1. Early November the heifers were taken through a two week syn-

chronization program to enable AI breeding them mid November. From breeding to sale day they have been hand fed 8 pounds/head/day of the same diet while grazing Flint Hills pastures. Our goal is to have them adequately grown (but not fat) to be problem free females after the sale.

1. Pre-weaning the heifers were vaccinated with Bovi-Shield Gold One Shot, Enforce 3, and Moraxella Bovis Bacterin-Toxoid Alpha 7/MB-1 (Blackleg & Pinkeye). At weaning heifers were boosted with the same and dewormed with injectable Dectomax. A blood sample was taken from each heifer and submitted to the AAA for DNA testing and parent verification. Additionally the heifers were tested for PI BVD and Brucellosis and found to be free of these diseases.

2. At approximately 365 days of age the heifers were bang vaccinated, weighed, hip height measured, dewormed for internal parasites with Valbazen and external parasites with Dextomax pour-on; and ultrasounded for carcass measurements (marbling, ribeye, rib fat thickness, and rump fat thickness) by Casey Worrel, a AAA CUP Certified technician from Harper Texas.
3. Approximately 45 days prior to breeding the heifers received a pre-breeding vaccination of Bovi-Shield Gold FP5 VL5 HB.
4. All heifers will be pregnancy checked and dewormed for external parasites prior to the sale.
5. The heifers are very accustomed to people and easy to handle. Extreme care is taken to produce heifers that are gentle and have good breeding longevity.

We appreciate your business!

Sells open. Powerful, easy fleshing, good footed Jet Black daughter that ranks #35 of all Jet Black sired dams in the AAA database. 91G ranks in the top 1% for WW, YW, RADG, \$W, 2% for RE, 3% for \$C, 5% for \$G & \$B, 10% for SC, 15% for Doc, HP, Milk & \$M. This is an awesome young female from a proven pedigree. She has been collected 4 times to average 8 viable embryos per collection.

We are offering elite genetic opportunities in the blending of BJ Prophet 5275, best known as the dam of the heavily used BJ Surpass, with highly proven sires Bar R Jet Black and GAR Home Town. The dam of these females anchors the ET program in the Knoll Crest Farm program where she is a powerful, easy fleshing individual who transmits her phenotype, performance, carcass merit, foot quality, and fertility to her progeny. A 5275 pregnancy by the popular Connealy Craftsman bull sold in the Angus at the Congress sale January 2023 for \$30,000. Home Town sisters to those selling include Hometown 26i, the \$80,000 valued half interest selection of Deer Valley Farm in the record setting 2021 Four Sons Farm sale; and Hometown 29i, the \$40,000 valued half interest of Kern Cattle Company in 2021 National Finals sale.

In addition, 5275 has three daughters in production combining for Weaning ratio of 3@104 and now has an ultrasound progeny record showing %IMF 35@104 with Yearling RE ratio of 35@100. Additionally, BJ Prophet 5275 was produced from a dam who has 11 daughters in production combining for a Weaning ratio 19@105 plus records %IMF ratio 35@110.

An opportunity to invest in superior genetic merit that will result in maternal siblings to the latest addition to the ABS Global Stud, BJ Surpass as well as maternal siblings to the very popular Spruce Mountain and Boyd Beef Cattle donor, BJ Playbook 9240.

THE BJ ANGUS GUARANTEE

We guarantee that all bulls sold by BJ Angus Genetics are fertile to the best of our knowledge. If a bull is injured anytime during the first breeding season following the sale so as to make them functionally infertile, we will provide you a satisfactory replacement, if available, or issue you a credit equal to the bulls purchase price minus the salvage value received for that bull. This is not a life insurance policy. We will not replace a dead animal if it is killed or dies for any reason. We would suggest normal care needs to be exercised toward these animals and particularly the yearling bulls not be allowed to get too thin. If a female is determined a non-breeder, then we would ask you to sell her and would offer you the difference of her purchase price minus the salvage value as a credit in any future BJ Angus Genetics Sale. This guarantee is in addition to the Sale Terms and Conditions of the American Angus Association which also apply.

FREE DELIVERY ANYWHERE IN THE LOWER 48 STATES!

Bulls will be delivered free anywhere in the lower 48 states. Commercial heifers will be delivered free in Kansas. As part of that delivery we work with reputable livestock transportation companies that we feel comfortable with in the handling of your cattle in both a professional and conscientious way. We will do everything possible to deliver your cattle to a point that is convenient for both you and the trucking company. In some cases where there are cattle from multiple owners loaded on the same truck, it is necessary for the buyer to meet the truck at a central location such as a livestock auction or veterinary clinic relatively close to them. We also encourage the drivers to be as flexible as possible and request that they do not deliver your cattle in the middle of the night if avoidable. If you would like to insure your cattle, you can do so on sale day. Most of the cattle are delivered within 30 days after the sale. If, for any reason, you desire an expedited delivery, please notify us and we will make arrangements for quicker delivery.

BRED COMMERCIAL HEIFERS

Twenty-five home raised heifers with average ROI of 227. The heifers were AI bred to the Select Sires, SC Abundance (19388669), then cleaned up with two GAR Cache sons for 40 days. The heifers will begin calving September 1, 2023. Abundance is a +10 CED, top 15% for growth and top 1% of the Angus breed for marbling and ribeye. He has a Method Genetics Retained Ownership Index (ROI) of 289, ranking in the top 3%

of the unique Method Genetics database.

Vaccination & Health: OCV. Pyramid with Response & Blackleg at 75 days of age. Pyramid 5, Blackleg and Dectomax injectable at 250 days of age followed with Pyramid 5 three weeks later. Vista 5 VL5 and Ivermectin Pour On pre-breeding. EID tags. **Free delivery in Kansas.**

Buyer must take a minimum of five head but may take the entire group of 25 heifers.

The Method Advantage

Method Genetics Benefits for Commercial Producers

You buy good bulls with key genetic values for herd improvement.

You know that EPDs are a selection tool to assist in focusing your production goals.

You target an industry-focused high quality carcass value as part of your breeding goals.

Yet, when it comes to the cow herd and replacement heifer choices or selection strategies, the access to commercial genetic selection tools aligned with your goals and in the language of our industry (EPDs, indexes) is limited.

Method Genetics® results may just be what you need. In nearly six years (that's about a generation interval in a commercial cow calf operation), Method customers in over 20 states now have access to EPDs and index values for their females to fine tune their selection strategies. This is a progressive step beyond just placing genetic pressure on the sire side of the equation.

What is the goal of Method Genetics?

Method Genetics provides a flexible, analytical opportunity for Angus-based cattle producers by using DNA technology and incorporating it into a genetic evaluation system.

Who is the target audience of Method?

Method selection tools are geared toward commercial Angus cow herds interested in characterizing potential replacement heifers and foundation females.

Why is Method Genetics different?

Established in 2014, Method Genetics LLC provides genetic selection tools and decision-making assistance related to commercial cattle production. Through the Method single-step multi-trait genetic evaluation, commercial cow-calf operators can access EPDs and indexes on their cow herd for use in genetic selection. DNA technology makes this selection advantage available to commercial herds, large and small, that in the past could only use EPDs in sire selection.

How do I use Method Genetics results?

Method results are typically used to rank replacement females for selection and culling. Producers review Method results when purchasing potential herd sires and use the Method rankings to match their herd goals. Emphasis is placed on the Method indexes for maternal, growth, and retained ownership.

How do I begin participating in Method Genetics?

Most producers begin by collecting DNA samples for genotyping. Blood cards and tissue sampling units are acceptable. There are no enrollment fees. Many producers have historical data from their herds (weaning weights, carcass data) that they have not ever really been able to fully utilize to aide in selection for their herds. This information can also

be incorporated into the genetic evaluation to give producers even more informative selection tools.

How are Method indexes (MPI, QPI, and ROI) computed?

Your genotyping results on tested animals go through our complete genetic evaluation that generates key Method Genetics EPDs and indexes. Method has a database of performance trait records, pedigrees, and DNA genotypes used in a single-step genetic evaluation to derive EPDs for use in the Method indexes. Method does not use breed organization EPDs are part of this process. Because of what we know about EPDs and their derivation, Method results are comparable to other Method results, but they are not comparable to breed organization EPDs.

Can this testing identify parentage?

Method Genetics has a large database of AI and natural service sires for use in sire assignment. Participants with tested females on file have the opportunity to generate pedigrees from this parentage benefit, adding increase accuracy to their Method results. Parentage work is included in the Method DNA testing at no cost.

What details are needed on commercial Angus samples for DNA testing?

Samples are sent directly to Method Genetics personnel. The minimum inputs needed for commercial cattle DNA samples are a unique herd ID, approximate age, and gender for each sample. We can incorporate any pedigree you know, also.

What is Method ROI that I keep hearing about and seeing in catalogs?

METHOD GENETICS
MPI/%
168/2
OPI/%
160/2
ROI/%
296/1

Cattle producers interested in a complete production system approach from conception through carcass end-point would typically use the Retained Ownership Income (ROI) index as a tool. ROI ties together reproduction, calving ease, maternal genetic merit, growth throughout the calf's lifetime, and quality-based carcass merit in an Angus-based herd.

The ROI is reported in dollars per calf produced in the herd, and it consolidates the sub-indexes of MPI and QPI.

What results are received after testing is completed?

Most producers receive the Method EPDs for calving ease, carcass traits, and docility. Of primary interest are the three Method Genetic index (MPI, QPI, ROI) solutions that accompany the EPDs. Results are returned in a sortable spreadsheet for use at the operation in breeding, selection and culling decisions.

How do my Method results compare to cow herds with similar goals?

Method customers receive summary statistics to compare their herd results to a database of similar commercial cow herds with goals focused on maternal and retained ownership traits for a high-quality carcass product. This benchmark data helps Method customers characterize and understand where their current herd's genetic level is and provides specific selection direction to reach goals for consistent, high-quality production of USDA Prime and Premium Choice product.

What is the Method Genetics Marketing Advantage?

Beyond the use of Method results for selection decisions by a commercial cow-calf producer, this information has become a reliable means to characterize the genetic merit of replacement females, providing confidence for buyers purchasing replacements. Selecting commercial replacement females with the Method Genetics results allow a producer to jump-start their program with known genetics based on a proven track record.

MPI: Maternal Production
QPI: Quality Pounds
ROI: Retained Ownership Income

Where do the percentile ranks on young sires and AI sires seen in catalogs come from?

Method has seedstock participants using the Method Prime test and they receive more detailed EPDs and percentiles based upon the Method Genetic population. They have made a commitment to their customers using the Method Genetics system by testing and providing the Method indexes on the bulls they offer. The bulls they sell provide a great opportunity as they have Method EPDs and indexes which are comparable to other Method Genetics-generated solutions, regardless of the testing points.

How do I choose a level of testing at Method?

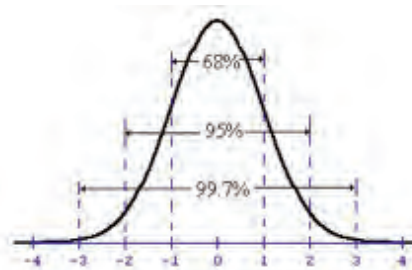

Most commercial Angus herds go with the Method Choice (\$34). Method Prime runs \$45 as of today and is used mostly by seedstock participants.

What age do I pull DNA samples on my animals?

DNA samples can be collected at any age. Advanced customers in the Method system have begun to use tissue sampling units on calves after birth. We encourage customers to conservatively approach testing and focus on the newest generations of their cattle.

I am already testing with Method Genetics, so how can I learn more about my cattle?

If details are provided from the customer, we use existing pedigree information (for example on registered Angus bulls owned or AI sires being used or females of known genetics) to fill in relationship gaps, as well as incorporating this pedigree information into the genetic evaluation tools created. From a performance record standpoint, we can also incorporate these data (contemporary group weaning weights for example) into a genetic evaluation and key EPDs and index values include this information.

Do Method Genetics results ever change?

We continue to add performance records, pedigree, and genotypes to the Method genetic evaluation. An EPD is a prediction of an animal's true genetic merit that has an associated possible change, or standard error of prediction. EPDs are not static values and can change as more information is incorporated into the system from one evaluation to the next. Customers actively participating in the Method Genetics program can request cow herd updates as needed to better prepare for bull selection and breeding herd management.

How can I learn more about Method Genetics benefits?

Method Genetics, LLC provides genetic selection tools that enhance decision making for commercial Angus cow-calf producers. Using genetic evaluation methodology with performance records, pedigree, and genomic information, Method Genetics® indexes provide customized solutions to assist producers in capturing and implementing genetic values into their individual breeding programs. For more information, contact Bill Bowman (bbowman@methodgenetics.com 816-752-0079) or Dr. Sally Northcutt (snorthcutt@methodgenetics.com 816-244-0969). General information is available on www.methodgenetics.com or follow us on Facebook.
